

2020 SUSTAINABILITY GOALS

MOVING THE WORLD FORWARD

SUSTAINABILITY AT HOME

UTC is continuously minimizing its environmental footprint. Here are ways you can extend sustainability at home.

ENERGY

- Unplug electronics when not in use to avoid “phantom load.”
- Increase the efficiency of your home heating and cooling system.
- ENERGY STAR® certified products generally use 20–30% less energy.

WATER

- Turn off the tap while brushing your teeth – save 3,000 gallons per year.
- One drip per second from your leaky faucet uses 2,000 gallons per year.
- UTC has supported rural water access in 100+ Indian villages – you can help.

FOOD

- Reduce food waste – the single largest contributor to municipal landfills.
- Understand food safety and expiration dates to reduce waste.
- Hunger, food security, climate emissions and water shortages are connected.

WHAT CAN YOU DO?

WASTE

- Paper, batteries, plastic, glass and used oil are easily recycled.
- Find locations where you can recycle used electronics.
- By composting you will reduce 20–30% of what we throw away.
